### Summary 2015

Compared to 2014, the total number of members is almost identical (+2). Since 2015 we have been working to identify and conclude the reason for the decrease in 2014.

As of now, it looks stabilized, and we expect a minor increase by the end of 2016. This amongst others due to a dedicated effort involving all members in committees and the board.

A total of 107 dogs in 24 litters were registered in 2015. This is the lowest amount in the last 5 years and 18% below the average for the last 5 years.

The average litter size was 4,5 with an average inbreeding of 1,05% for 5 generations (0.76% for 6 generations). This year's litter size is 0.2% below the last 5-year average.

Despite the inbreeding level having decreased with 86% compared to last year (5 generations), the average inbreeding is still 17% below the last 5- year average (comparing the inbreeding coefficient for 6 generations).

In respect of the later years tendency of breed-requests related dogs with HD status C, 17% (4 of the 24 litters) had one parent with HD status C. In all four litters, the partner had HD status A as recommended. 25% of the litters (6) had parents with HD status A+A, 41% (10) had parents with HD status A+B, and 17% had parents with HD status B+B.

A total of 8 dogs (5 puppies and 3 adults) have been imported.

A total of 52 dogs were eye (ECVO) examined.

A total of 56 dogs were hip (HD) scored, and of these 47 dogs (84%) were diagnosed as "free" from HD (A or B).

In respect of dogs participating in dog shows, Icelandic Sheepdogs have been represented in 12 Kennel Club shows and 7 Club Shows. A total of 238 dogs (average 19.8) was registered in the Kennel Club shows, whereas a total of 257 (average 36,7) was registered in the Club shows.

A total of 39 dogs were mental tested and we have now collected data from 548 different dogs. This consolidates the Icelandic Sheepdog's position as the third most tested breed in the Danish Kennel Club. Of the 39 dogs only 2 did not complete the test due to anxiety after more gun shots.

In respect of herding a total of 5 dogs were tested against our own developed herding instinct test. A new herding test has been developed by the Danish Kennel Klub and the herding committee is currently evaluation whether to change to the DKK one, as it can be written into the pedigree of the dog.

In respect of breeding agreements, the Danish Kennel Klub has enforced the use of the official DKK buying agreement. This to ensure the legality of any agreement and to avoid outrageous and unheard clauses and obligations. The agreement is generated automatically in "Hundeweb."

Jørgen Metzdorff, Chairman

Else Westermann, Breeding Committee
