These are dogs who are near our breed limits or over. There are also adult imports who has litters at home country then imported to Finland and also used for breeding here. Some of them are on the list.

New registration rule was updated 2022(?): now dogs under 5 years can get only 9 puppies (of course whole litter will registered if amount will be over limit) and after 5 years, dog can have max 18 puppies (whole litter will be registered if amount will be over limit). Idea of this was fighting against a matador breeding and using very young dogs too much.

Our registration amounts of a dog have been only 40-50 puppies / year during several years. This is a reason why our national limits have to be much lower than ISIC international limits. Now amounts are growing up, but we will see in couple of years if this is caused by corona or is this a real chance in future.

## Appendix

Operate dog:

Gelgja's Bára (Gelgja's Skirnir x Punapihlajan Amma) Her left knee is 0 and right have been operated after patella luxation.

The Finnish Kennel club has a rule that the knee result is valid only for two years if the dog is under three years old, when the knees are checked. This means that many dogs have been – and will be - checked for knees two times. 2012 is the first year for this rule, so the figure also includes double-checked dogs. There was no tool to pick only one result from each dog.

Descripted dogs	16/6	29/-	16/1	20/1	26/3
In total	22	29	17	21	29

The first number is the "old version" Finnish character tested dogs and second is for MH- tested dogs. MH-test doesn't work very well in Finland. Hopefully we will find a solution to this problem in the future and get more dogs to MH.
