### Summary

Litters registered: 53  
Puppies: 248  
Average inbreeding: 0,7573 %  
Average litter size: 4,6  
Imported dogs: 6

2021 was our 25th anniversary. We had hoped for a fine celebration on our "annual Træf", but due to covid-19 we couldn't. So, the festivities were kept on a lower level. Still, we had a wonderful Træf where we gathered around our mutual interests in dogs.

It was possible to gather 127 persons and 100 dogs for the Træf weekend with unofficial Show, Rally-O, LP and agility. However, like last year, most of the social events like banquet and joined barbeque were cancelled.

Due to covid-19, we had to cancel some of our shows. However, it was possible to host:

Four Club Shows with a total of 144 entries. Eleven (11) DKK shows of 195 entries. Twenty-seven (27) mentality descriptions.

From a breeding perspective, the number of litters set a record in 2021: 248 puppies. We haven't had such a record since 2018, where 208 puppies were born. The numbers of breeders have increased, something we are very happy about.

We still focus on status for x-rayed dogs (HD and ED). HD results seem to be deteriorated in recent years. Especially results going from B to C. This topic has also been brought up in the Danish Kennel Klub (DKK) who has made some studies for all breeds. Some of the explanation might be found in the vets improved equipment and technology. But this is far from the whole truth. We cannot ignore the impact of heritage and environment. We are trying to find answers and we will be looking deeper into this issue and try to have as many dogs x-rayed as possible. We all need to do our best to use good and healthy dogs in breeding.

Mentally descriptions (in Danish named MBU)

Looking at the mental health in our dogs, MBU is a fine tool to use for breeders when they look for a mate for their dogs, and for the owners to know more about their dog – both in terms of training/sports and as a family member.

In Denmark, we are aiming on having as many dogs as possible described. But there is still a long way to go. In 2021 we have had only 27 icies through MBU. 2022 seems to be a lot better though.

We are also working on a puppy test for the new litters before they leave the breeders. This is a very light and mild version of the MBU. It is used to help breeders when matching the puppies with their new families. – and the result for the puppy is also shared with the new family so they know how to help and support their puppies.

In March 2021 we had 1 herding test. 7 dogs were tested. 6 of them had a very good result 1 not so good. We wish to be able to offer more of these tests, but for the time being we have no herding committee and no sheep to use for the tests. We are currently looking for someone to join our herding committee and to implement these tests on a regular basis again.

Charlotte Kemp, Chairman  
Tove Møller Christensen, Breeding Committee
